Lesson number 6 | C4 plastic explosive

Improvised Plastic Explosive

The explosive made for this bomb can be turned to powerful plastic explosive which can be molded into any shape for disguise.

When done this explosive will look like children's play clay and can be disguised in these containers to make look harmless. Explosive must be used within a month to ensure it does not dry and become crumbled and not able to mold. A TATP detonator needs to be used to explode the plastic.

Chemicals Required:

Potassium Chlorate (Match Heads)

Black Seed
Motor Oil
Flour

Equipment Required:

Kitchen Scale
Measuring Cups and Spoons
Hot Plate
Mixing Bowl
Latex Gloves
Knife
Sauce Pan
Cheese Cloth
Cookie Tray
Table Fan

Preparation:

Step 1 – Prepare the Chlorate of Potassium

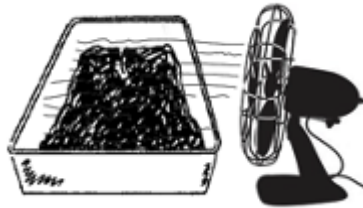

This chemical can be found for sale in some areas, but might create suspicion if bought. get chlorate from matches. A box of 100 matches will give 1 gram of chlorate. Carefully use a knife to scrape chemicals from match stick head. Do not use light anywhere matches.

Once enough match mix is recovered put it in a pot with boiling water. Chlorate will go into water. Take cheesecloth and rubber band in place over bowl. Filter match water through cheesecloth. Throw away solid on cloth.

Take match water and put in a cookie tray. Water needs to be removed to get chlorate. Do not put mix in oven. Keep fan blowing on mixture until water is gone. Mixture should break up by pushing down on it with spoon when dry. Put dry powder aside for later use

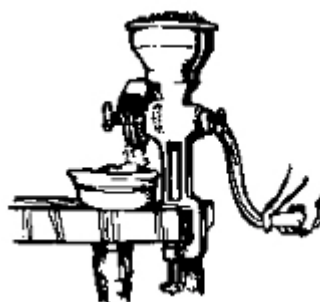

Step 2 – Prepare the Black Seed

Place 50 grams of black seed in a sauce pan on low heat. In some places seed is called black cumin. Do not buy cumin spice. Use fresh seed only

Cook the seeds for 2-3 minutes. Take the dry seeds and run through a grinder. A coffee grinder or grain mill can be used to crush seeds

Seeds will give oily powder. Put ground seeds in sealed container until ready to use in explosive mixture.

Step 3 – Mix Explosive Components

In mixing bowl add the following:

240 grams chlorate

80 grams black seed

360 grams flour

Mix the powders together until powder all one even color

Step 4 – Lubricate the Mixture

To the powders add 90 mL Motor Oil.

Do not use heavy oil. Wikipedia entry for C4 notes “low-viscosity motor oil is used in the manufacture of C-4 for civilian use.”

With gloves on hands mix motor oil into explosive powder. Material will become sticky and clumpy until all oil is evenly mixed. Then mix will be dry and crumbly when done.

Step 5 – Make mixture moldable

Heat water on hot plate until starting to boil. Turn off heat. Let cool 1 minute. Slowly add total of 180 mL of water to crumbly mixture. While adding water work mixture by hand to make sure water evenly works into powder.

Work mixture for 10 to 15 minutes by hand like in making bread.

Explosive will change from crumbling to sticking together and moldable. If pulled apart mixture will stretch then break.

Store mixture in glass or plastic container to keep soft. Use within one month.

Done

And God is the one who provides success
